## **Question**:

If the points  $\mathbf{A}(6,1)$ ,  $\mathbf{B}(8,2)$ ,  $\mathbf{C}(9,4)$ ,  $\mathbf{D}(p,3)$  are the vertices of a parellelogram, taken in order, find the value of p.

## **Solution**:

Given the points are the vertices of a parllelogram.

If ABCD is a parellelogram with AB||CD,

$$\binom{8}{2} - \binom{6}{1} = \binom{9}{4} - \binom{p}{3}$$
$$\binom{2}{1} = \binom{9-p}{1}$$
$$9-p=2$$
$$p=7$$
